

Module handbook

M.Sc. Psychology in Sport and Exercise [M.Sc. PSE]

Valid for first-year students: Winter term 2023/24 onward

**Deutsche
Sporthochschule Köln**
German Sport University Cologne

Competences

The Master of Science “Psychology of Sport and Exercise” is a research-oriented consecutive course of studies. It aims to integrate research topics of psychology and sport science such that a perspective emerges related to movement, health, organization, and relevant aspects of neuro- and social science. During their studies, students acquire academic knowledge and competences to represent, scientifically explore, and to transfer these aspects to the applied field.

With respect to **scientific competences**, they acquire and deepen the ability to process research questions from a broad range of sport psychological basic research (e.g. the role of motivation, emotion, and cognition in sports). In addition, they acquire a broad spectrum of research methods related to data analysis and study conduction. Thereby, they take advantage of the national and international networks of the participating institutes, specifically of the Institute of Psychology. Overall, the graduates are being qualified for activities and occupation in sport psychology, sport science, as well as in psychology.

With respect to **competences in the applied field**, the students acquire and deepen the ability to develop, conduct and evaluate sport psychological consulting, diagnostics and intervention on a solid scientific ground. This is supported by the acquisition of organizational competences, e.g. the ability to develop networks, conduct educative workshops. Thus, here knowledge-related competences will go in hand with concrete competence related to occupational actions.

Generally, the students will extend their *general, i.e. translational competences* going beyond their professional profile. By this and the unique curriculum of PSE, students will be able to apply their knowledge to other fields and solve complex problems in an innovative way.

Going beyond this, students learn basic strategies of *scientific problem solving*. This will allow them to make competent decisions in situations with restricted access to information. Further, they will be able to acquire knowledge and competences in new fields. This will be achieved by interdisciplinary work groups where they test project and self management. Additionally, the studies support and sharpen the *attitude towards life-long learning* in academic occupation. Also, students will be supported to be able to fulfil social, ethical and moral aspects.

Competences related to communication and emotions are becoming increasingly important for work success. Thus, learning and acting in teams is an essential aspect when studying PSE, as well as presenting research topics. Thereby, different target groups will be addressed ranging from the scientific community to the applied field, as well as laypeople. Graduates should be able to present, discuss and communicate sovereignly with respect to the demands of these target groups.

Other aspects like *the development of personality or social competences* will be taken into account as well by providing an academic framework that allows the graduates to develop themselves to sensible, interested and critical individuals. Especially intercultural exchange is a challenge that provides the opportunity for experience and to learn critical reflection. The communication competences will be extended by integrating different teaching strategies (e.g. tutor system in PSE 1 and project work in PSE10, team work in PSE4).

Module Description

Module: Introduction in Psychology, Sport and Exercise
Degree program: M.Sc. Psychology in Sport and Exercise [M.Sc. PSE]
Valid for students who started: Winter term semester 2023/24

German module title	Einführung in psychology, sport and exercise
Abbreviation	PSE1
Subject related semester / Duration	1. SRS / 1
Total Workload / Total ECTS points	150 h / 5
Courses of the module Title Semester hours per week / Contact time / Self-study / Semester of study / Type of class / Language of instruction / Mandatory attendance	<p>a) Revision course on sport science, psychology and research methods 1 SHW / 15 h / 95 h / 1. SRS / TUT / English / yes</p> <p>b) Nobel laureates of sport and psychology 1 SHW / 15 h / 25 h / 1. SRS / SE / English / no</p>
Key competencies	<p>The students are able to ...</p> <ul style="list-style-type: none"> • outline and combine declarative knowledge from BA-sport and BA-psychology backgrounds • explain, discuss and teach own declarative knowledge to others
Central contents	<p>a) Revision course on sport science, psychology and research methods:</p> <ul style="list-style-type: none"> • Re-Activate and teach knowledge and add new knowledge from sport science, including motor learning, control, biomechanics, central and peripheral system, methods used in sports, psychology including biopsychology, developmental, social, cognitive psychology, methods used in psychology <p>b) Nobel laureates of sport and psychology:</p> <ul style="list-style-type: none"> • Search for persons and areas of research and transfer of knowledge in the area the students BA was not based on • Understand the evaluation of performance in sport and psychology • Present a laudatio as a group for a person you think deserves a Nobel laureate for his/her added value to the field
Teaching and Learning Methods	Revision, laudatio, learning through teaching. Former BA-psychology students will provide teaching for former BA-sport students and vice versa
Recommended Literature	Specific literature recommendations are given in the respective courses by the lecturer during the course of the semester
Type of module (compulsory/elective)	Compulsory
Prerequisites	Cf. Overview Prerequisites
Intermediate Assessments	For "Nobel laureates of sport and psychology": presented laudatio

Module Description

Assessment / extent / share of the module grade	PSE1 a): Written exam ungraded (Multiple choice, 90 minutes) PSE1 b): Presentation ungraded
Weight of module	100 %
Module Commissioner	Cf. Overview Module Commissioner

Subject to modifications

Module Description

Module: Research Methods: Advanced Studies
Degree program: M.Sc. Psychology in Sport and Exercise [M.Sc. PSE]
Valid for first-year students: Winter term 2021/22 onward

German module title	Forschungsmethoden für Fortgeschrittene
Abbreviation	PSE2
Subject related semester / Duration	1. & 2. SRS / 2
Total Workload/Total ECTS points	390 h / 13
Courses of the module Title Semester hours per week / Contact time / Self-study / Semester of study / Type of class / Language of instruction / Mandatory attendance	<p>a) Statistics Lectures Series 1 SHW / 15 h / 30 h / 1 / LEC / English / no</p> <p>b) Tutorial Software aided application of a advanced statistics 3 SHW / 45 h / 120 h / 1 / TUT / English / yes</p> <p>c) Measurement and research design 2 SHW / 30 h / 90 h / 2 / SE / English / yes</p> <p>d) Tutorial Software aided study conduction 1 SHW / 15 h / 45 h / 2 / TUT / English / yes</p>
Key competencies	<p>The students are able to ...</p> <ul style="list-style-type: none"> • understand, describe, identify and select procedures of advanced inferential statistics • apply (i.e., calculate, interpret and report) procedures of advanced inferential statistics with the use of software • describe and apply complex quantitative research methods that are relevant in empirical research. • develop and transfer models and methods into basic and applied research. • conduct, analyze and interpret complex research designs in basic and applied research. • apply software for study conduction.
Central contents	<p>a) Statistics Lectures Series Multivariate data handling and statistics:</p> <ul style="list-style-type: none"> • Advanced inference statistics • Structural equation models <p>b) Tutorial Software aided application of a advanced statistics:</p> <ul style="list-style-type: none"> • Computer aided application of the statistical models learned in the lecture with the use of statistical programs like SPSS or R • Computer aided application of additional statistical models relevant to the research in the field of sport psychology (e.g. multilevel modeling) <p>c) Measurement and research design:</p> <ul style="list-style-type: none"> • Developing research questions and deriving research designs • Learning about the foundations of good scientific practice and the ideas of Open Science • Learning how to plan and conduct studies

	<ul style="list-style-type: none"> • Meta-analysis • Statistical significance vs. practical relevance (i.e. statistical power) • Qualitative approaches <p>d) Tutorial Software aided study conduction:</p> <ul style="list-style-type: none"> • Introduction to scientific programming • Software aided research design and study conduction • Introduction to online and offline questionnaire design • Introduction to a programming language for conducting experiments
Teaching and Learning Methods	Teacher-centered teaching, computer aided tutorials, presentations, group work, self-experience, interactive demos
Recommended Literature	Specific literature recommendations are given in the respective courses by the lecturer during the course of the semester
Type of module (compulsory/elective)	Compulsory
Prerequisites	Cf. Overview Prerequisites
Intermediate Assessments	None
Assessment / extent / share of the module grade	PSE2 a), b): Written exam mc items + open questions: 90 minutes PSE2 c): Presentation (group-wise, 60-75 minutes)
Weight of module	Written exam: 60% Presentation: 40%
Module Commissioner	Cf. Overview Module Commissioner

Subject to modifications

Module Description

Module: **Diagnostics, Intervention and Evaluation**
Degree program: **M.Sc. Psychology in Sport and Exercise [M.Sc. PSE]**
Valid for first-year students: **Winter term 2021/22 onward**

German module title	Diagnostik, Intervention und Evaluation
Abbreviation	PSE3
Subject related semester / Duration	1. & 2. SRS / 2
Total Workload/Total ECTS points	360 h / 12
Courses of the module Title Semester hours per week / Contact time / Self-study / Semester of study / Type of class / Language of instruction / Mandatory attendance	<p>a) Diagnostics, intervention and evaluation 2 SHW / 30 h / 60 h / 1 / LEC / English / no</p> <p>b) Diagnostics, intervention and evaluation in research settings 2 SHW / 30 h / 120 h / 1 / TUT / English / yes</p> <p>c) Diagnostics, intervention and evaluation in applied settings 1 SHW / 15 h / 75 h / 2 / TUT / English / yes</p>
Key competencies	<p>The students are able to ...</p> <ul style="list-style-type: none"> recite and describe principles and methods in diagnostics and evaluation apply principles and methods in different settings of psychology of sport and exercise develop and realize diagnostics and/or evaluations in different settings of psychology of sport and exercise
Central contents	<p>a) Diagnostics, intervention and evaluation:</p> <p>I. Diagnostics</p> <ul style="list-style-type: none"> systematic of psychological objects of diagnostic diagnostical approaches in sport psychology quality criteria different types of diagnostic measures (e.g. questionnaire, interview, observation/behavior measurement, Multi-method/ mixed methods, psychological opinion (expert report) ethical concerns of diagnostics <p>II. Intervention</p> <ul style="list-style-type: none"> Theory based modeling of intervention/treatments Nature/structure of psychological intervention/treatments Differences between individual and group treatments Effect bias (environment, situation, persons) Treatments in research Treatments in applied sport psychology Ethical concerns of intervention <p>III. Evaluation</p> <ul style="list-style-type: none"> process of evaluation evidence levels

Module Description

Subject related semester / Duration	1.-3. SRS / 1
Total Workload / Total ECTS points	270h / 9
Courses of the module Title Semester hours per week / Contact time / Self-study / Semester of study / Type of class / Language of instruction / Mandatory attendance	Preparation, realization and evaluation of a scientific project, choose between a) and b) a) Health and social psychology <ul style="list-style-type: none"> Relationships, teams and group dynamics or Motivation, emotion, stress, and mental health 2 SHW / 30h / 210h / 3 / TUT / English / yes or b) Performance psychology <ul style="list-style-type: none"> Emotion, cognition, psychophysiology, performance or Action, cognition, perception, and performance 2 SHW / 30h / 210h / 3 / TUT / English / yes c) Participation in studies 0 SHW / 0h / 30h / 1-3 / participation in studies / English / yes
Key competencies	Students are able to ... <ul style="list-style-type: none"> work methodologically, empirically, conceptually and systematically (this includes: to review the state-of-the-art in a field, to identify research gaps, to design experiments addressing the research gap(s), to develop (statistical) hypotheses, to conduct an experiment, to apply scientific methods and analyze/interpret data, to effectively communicate research findings; to identify limitations, to infer future research questions, to discuss practical implications) graphically edit and present research findings estimate chances and risks associated with a research project (e. g. high dropout rates or small sample sizes) assess feasibility and logic of research designs (e. g. to avoid including too many constructs, independent/confounding variables) evaluate ethical considerations associated with scientific research obtain project management skills and team competences realistically estimate effort, and predict resources, required to conduct research projects
Central contents	<ul style="list-style-type: none"> Principals of planning and realizing a research project

	<ul style="list-style-type: none"> • Developing research questions, generating hypotheses, planning research designs • Advanced literature review strategies, APA standards • Applying research methods (selection, application, analysis) • Analyzing data • Advanced planning and writing an abstract • Visualizing project results, simulating the participation in a scientific congress <p>The contents should be elaborated both theoretically as well in terms of supervision of the respective project.</p>
Teaching and Learning Methods	Group work, presentations, (scientific) writing
Recommended Literature	Specific literature recommendations are given in the respective courses by the lecturer during the course of the semester
Type of module (compulsory/elective)	Compulsory
Prerequisites	Cf. Overview Prerequisites
Intermediate Assessments	Details will be given in the first session of the semester start.
Assessment	PSE 10 a) or b): Poster creation and project presentation (group poster presentations) PSE 10 c): Participation in studies (ungraded)
Weight of module	100 %
Module Commissioner	Cf. Overview Module Commissioner

Subject to modifications

Module Description

Module: Master Thesis
Degree program: M.Sc. Psychology in Sport and Exercise [M.Sc. PSE]
Valid for first-year students: Winter term 2020/21 onward

German module title	Masterarbeit
Abbreviation	PSE11
Subject related semester / Duration	4. SRS / 1
Total Workload/ Total ECTS points	840 h / 28
Courses of the module Title, Semester hours per week / Contact time / Self-study / Semester of study / Type of class / Language of instruction / Mandatory attendance	a) Colloquium 2 SHW / 30 h / 30 h / 4 / SE / English / yes
Key competencies	The students are able to ... <ul style="list-style-type: none"> • obtain and evaluate information (summarize and improve descriptions of the current state of the art) • work methodologically, conceptually and systematically (justify and motivate methodological and conceptual choices of other and own theoretical and empirical work) • organize one's own work (time and project management, team respectively cooperative spirit) • apply their in-depth methodological competencies (breadth and rationale for method selection and usage) • convert an in-depth scientific working approach (structure, logic and justification of scientific work) • attain and evaluate scientific data critically (find alternative explanations and design to test alternatives)
Central contents	<ul style="list-style-type: none"> • Project management • Develop a research problem • Evaluate a theoretical framework and conduct a literature review • Scientific writing • Develop a theoretical model (and hypotheses) • Apply adequate methodology to the research issue • Analysis and discussion of results
Teaching and Learning Methods	
Recommended Literature	Specific literature recommendations are given in the respective courses by the lecturer during the course of the semester
Type of module (compulsory/elective)	Compulsory
Prerequisites	Cf. <u>Overview Prerequisites</u>
Intermediate Assessments	None
Assessment / extent / share of the module grade	Master Thesis / 100%
Weight of module	100%

Module Description

Deutsche
Sporthochschule Köln
German Sport University Cologne
